FOREWORD

(Formal clause to be added later)

A series of Indian Standards have been prepared for various hand tools and a series of Indian Standards for the corresponding wooden handles for use with these hand tools have been prepared. General requirements for wooden tool handles are covered by IS 620. This standard deals with wooden handles for sizes conforming to IS 663.

This standard was first published in 1964 and subsequently revised in 1980 and 1992. This standard has been taken up for revision with a view to bring its provisions in line with current practices. In this revision, the following modifications have been incorporated:

- a) BIS certification marking clause has been updated;
- b) References to various Indian Standards have been updated; and
- c) The standard has been aligned with the latest style and format of Indian Standards, with editorial and structural changes to improve clarity and ease of use.

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'. The number of significant places retained in the rounded-off value should be the same as that of the specified value in this standard.
