Leather, Tanning Materials and Allied Products,
Sectional Committee, CHD 17

Last Date for Comments: **As per the covering letter**

NATIONAL FOREWORD

(Formal clause will be added later)

The Indian Standard IS 5914 : 1970 Methods of physical testing of leather prescribes the methods for carrying out physical tests for all types of leathers. The Committee responsible for formulating this standard has decided to harmonize the methods of test prescribed in IS 5914 with those prescribed in ISO/IULTCS standards. Accordingly, the Committee decided to retain IS 5914 and publish the harmonized/adopted test methods published by ISO/IULTCS in various parts of IS 5914 as this standard is widely recognized by the Indian Leather Industry.

The Committee further decided to publish the adopted/harmonized standards in the following manner:

- a) Wherever an existing test method is being replaced by the corresponding ISO/IULTCS test method, the relevant part will be published as revision with the information in the national foreword about the method of IS 5914 being superseded; and

- b) When a new test method is being incorporated in IS 5914 the same will be published as a new standard and as subsequent part of IS 5914.

This Indian standard was first published in 2024 as an identical adoption of ISO 17232 : 2017 under dual numbering. ISO 17232 : 2017 has been revised and published as ISO 17232: 2025. The first revision of the IS 5914 (Part 9) has been brought out to adopt the revised version ISO 17232: 2025.

This first revision of this standard has been undertaken in order to adopt the latest version of ISO 17232: 2025. In this revision, following modifications have been incorporated:

- a) Alignment with the changes and revised terminology in IS 5868 (Part 2) : 2025/ISO 2418 : 2023 and IS 5868 (Part 3) : 2026/ ISO 2419 : 2024; and
- b) Modification of the testing conditions (4.3 and 5.3).

This (Part 9) specifies two methods for determining the heat resistance of patent leather. Method A makes use of a modified lastometer, while Method B uses the “Zwik” apparatus. Both methods are applicable to patent leathers for all end uses.

IS 5914 have been published in several parts. The other part of this series are:

Part 1 Determination of water vapour absorption

Part 2 Determination of abrasion resistance

Sec 1 Taber method

Sec 2 Martindale ball plate method

Part 3 Determination of soiling

Sec 1 Rubbing (Martindale) method

Sec 2 Tumbling method

Part 4 Determination of apparent density and mass per unit area

Part 5 Determination of tear load

Sec 1 Single edge tear

Sec 2 Double edge tear

Part 6 Determination of flex resistance

Sec 1 Flexometer method

Sec 2 Vamp flex method

Part 7 Determination of resistance to grain cracking and grain crack index

Part 8 Determination of tensile strength and percentage elongation

Part 9 Determination of heat resistance of patent leather

Part 10 Determination of surface coating thickness

Part 11 Determination of thickness

Part 12 Determination of water vapour permeability

Part 13 Determination of softness

Part 14 Determination of resistance to horizontal spread of flame (under publication Doc No. : 28698)

Part 15 Determination of water resistance of heavy leathers (under publication Doc No. : 28699)

Part 16 Leather — Determination of water resistance of flexible leather

Sec 1 Repeated linear compression (Penetrometer) (under publication Doc No. : 28714)

Part 17 Determination of water resistance repellency of garment leather (under publication Doc No. : 28715)

Part 18 Determination of the static absorption of water (under publication Doc No. : 34133)

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions and terminologies are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'
- b) Comma (,) has been used as a decimal marker in the International Standard, while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

In this adopted standard, reference appears to certain International Standards for which Indian Standards also exist. The corresponding Indian Standards, which are to be substituted in their places, are listed below along with their degree of equivalence for the editions indicated:

<i>International Standard</i>	<i>Corresponding Indian Standard</i>	<i>Degree of Equivalence</i>
ISO 2418 Leather — Chemical, physical, mechanical and fastness tests — position and preparation of specimens for testing	IS 5868 (Part 2) : 2025/ISO 2418 : 2023 Leather — Methods of Sampling Part 2 Position and preparation of specimens for testing for chemical, physical, mechanical and fastness tests (second revision)	Identical
ISO 2419 Leather — Physical and mechanical tests — Specimen and test piece conditioning	IS 5868 (Part 3) : 2026/ ISO 2419 : 2024 Leather — Methods of Sampling Part 3 Specimen and Test Piece Conditioning for Physical and Mechanical Tests (second revision)	Identical

The Technical Committee responsible for the preparation of this standard has reviewed the provisions of the following International Standards referred in this adopted standard and has decided that they are acceptable for use in conjunction with this standard.

<i>International Standard</i>	<i>Title</i>
ISO 15115	Leather — Vocabulary
EN 15987	Leather — Terminology — Key definitions for the leather trade

In this adopted standard, reference appears to certain International Standards where the standard atmospheric conditions to be observed are stipulated which are not applicable to tropical/subtropical countries. The applicable standard atmospheric conditions for Indian conditions are 27 °C ± 2 °C and (65 ± 5) percent relative humidity and shall be observed while using this standard.

In reporting the result of a test or analysis made in accordance with this standard, if the final value, observed or calculated, is to be rounded off, it shall be done in accordance with IS 2 : 2022 'Rules for rounding off numerical values (second revision)'.
