NATIONAL FOREWORD

(Formal clause will be added later)

The Indian standard IS 6191 : 1970 Methods of micro-biological, colour fastness and microscopical tests for leather prescribes various microbiological test methods, colour fastness test methods and test methods for the preparation of microscopical slides for assessment of leather, hides and skins. The Committee responsible for formulating this standard has decided to harmonize the methods of test prescribed in IS 6191 with those prescribed in ISO/IULTCS standards. Accordingly, the Committee decided to retain IS

6191 and publish the harmonized/adopted test methods published by ISO/IULTCS in various parts of IS 6191 as this standard is widely recognized by the Indian Leather Industry.

The Committee further decided to publish the adopted/harmonized standards in the following manner:

- a) Wherever an existing test method is being replaced by the corresponding ISO/IULTCS test method, the relevant part will be published as revision with the information in the national foreword about the method of IS 6191 being superseded.
- b) When a new test method is being incorporated in IS 6191, the same will be published as a new standard and as subsequent Part of IS 6191.

The Technical Committee responsible for formulation of this standard decided to publish the latest version of ISO 11642 'Leather — Tests for colour fastness — Colour fastness to water' as Part 2 of IS 6191.

This Indian standard was first published in 2017 as an identical adoption of ISO 11642 : 2012 under dual numbering. ISO 11642 : 2012 was revised and published as ISO 11642 : 2025. The first revision of the IS 6191 (Part 2) was brought out to adopt the revised version ISO 11642 : 2025.

The first revision of this standard has been undertaken in order to adopt the latest version of ISO 11642 : 2025. In this revision, following modifications have been done:

- a) Update of normative reference, in particular to IS 5868 (Part 2) : 2025/ISO 2418 : 2023 and to ISO 7906.

This (Part 2) specifies a method for determining the colour fastness to water of leather of all kinds at all stages of processing.

IS 6191 have been published in several parts. The other part of this series are:

Part 1 Colour fastness to water spotting

Part 2 Colour fastness to water

Part 3 Colour fastness to machine washing

Part 4 Colour fastness to cycles of to-and-fro rubbing

Part 5 Test for adhesion of finish

Part 6 Colour fastness to perspiration

Part 7 Colour Fastness to Migration into Polymeric Material

Part 8 Change in colour with accelerated ageing

Part 9 Leather — Measuring the colour and colour difference of finished leather (under publication Doc No. : 28720)

Part 10 Leather — Tests for colour fastness — Colour fastness to crocking (under publication Doc No. : 28721)

Part 11 Leather — Tests for colour fastness — Colour fastness of small samples to solvents (under publication Doc No. : 34123)

Part 12 Leather — Tests for colour fastness — Colour fastness to mild washing (under publication Doc No. : 34124)

Part 13 Footwear — Test methods for upper components and insoles — Colour fastness to rubbing and bleeding (under publication Doc No. : 34125)

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions and terminologies are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'.
- b) Comma (,) has been used as a decimal marker in the International Standard, while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

In this adopted standard, reference appears to certain International Standards for which Indian Standards also exist. The corresponding Indian Standards, which are to be substituted in their places, are listed below along with their degree of equivalence for the editions indicated:

<i>International Standard</i>	<i>Corresponding Indian Standard</i>	<i>Degree of Equivalence</i>
ISO 105-A02 Textiles — Test for colour fastness — Part A02: Grey scale for assessing change in colour	IS/ISO 105-A02 : 1993 Textiles – Tests for colour fastness Part A02 Grey scale for assessing change in colour	Identical
ISO 105-A03, Textiles — Tests for colour fastness — Part A03: Grey scale for assessing staining	IS/ISO 105-A03 : 2019 Textiles Tests for colour fastness Part A03: Grey scale for assessing staining first revision of ISISO 105 - A03	Identical
ISO 105-A04, Textiles — Tests for colour fastness — Part A04: Method for the instrumental assessment of the degree of staining of adjacent fabric	IS/ISO 105-A04 : 1989 Textiles – Tests for colour fastness Part A04 Method for the instrumental assessment of the degree of staining of adjacent fabrics	Identical
ISO 105-A05, Textiles — Tests for colour fastness — Part A05: Instrumental assessment of change in colour for determination of grey scale rating	IS/ISO 105-A05 : 1996 Textiles – Tests for colour fastness Part A05 Instrumental assessment of change in colour for determination of grey scale rating	Identical
ISO 105-F01 Textiles — test for colour fastness — Part F01: Specification for wool adjacent fabric	IS/ISO 105-F01 : 2001 Textiles – Tests for colour fastness Part F01 Specification for wool adjacent fabric	Identical
ISO 105-F02 Textiles — test for colour fastness — Part F02: Specification for cotton and viscose adjacent fabrics	IS/ISO 105-F01 : 2001 Textiles – Tests for colour fastness Part F01 Specification for wool adjacent fabric	Identical
ISO 105-F03 Textiles — test for colour fastness F03: Specification for polyamide adjacent fabric	IS/ISO 105-F03 : 2001 Textiles – Tests for colour fastness Part F03 Specification for polyamide adjacent fabric	Identical
ISO 105-F04 Textiles — test for colour fastness F04: Specification for polyester adjacent fabric	IS/ISO 105-F04 : 2001 Textiles – Tests for colour fastness Part F04 Specification for polyester adjacent fabric	Identical
ISO 105-F05 Textiles — test for colour fastness F05:	IS/ISO 105-F05 : 2001	Identical

Specification for acrylic adjacent fabric	Textiles – Tests for colour fastness Part F05 Specification for acrylic adjacent fabric	
ISO 2418 Leather — Chemical, physical, mechanical and fastness tests — position and preparation of specimens for tasting	IS 5868 (Part 2) : 2025/ISO 2418 : 2023 Leather — Methods of Sampling Part 2 Position and preparation of specimens for testing for chemical, physical, mechanical and fastness tests (second revision)	Identical

The Technical Committee responsible for the preparation of this standard has reviewed the provisions of the following International Standards referred in this adopted standard and has decided that they are acceptable for use in conjunction with this standard.

<i>International Standard</i>	<i>Title</i>
ISO 105-F06	Textiles — test for colour fastness F06: Specification for silk adjacent fabric
ISO 105-F07	Textiles — test for colour fastness F07: Specification for secondary acetate adjacent fabric
ISO 105-F10	Textiles — test for colour fastness F10: Specification for adjacent fabric Multifibre
ISO 3696	Water for analytical laboratory use — Specification and test methods
ISO 7906	Leather — Tests for colour fastness — General principles of testing

In this adopted standard, reference appears to certain International Standards where the standard atmospheric conditions to be observed are stipulated which are not applicable to tropical/subtropical countries. The applicable standard atmospheric conditions for Indian conditions are 27 °C ± 2 °C and (65 ± 5) percent relative humidity and shall be observed while using this standard.

In reporting the result of a test or analysis made in accordance with this standard, if the final value, observed or calculated, is to be rounded off, it shall be done in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'.
